

Client Case Study Sheet

JMP
Construction & Property Consultants

Project: New Build Housing, Moorpark, Renfrewshire
Client: Williamsburgh Housing Association
Value: £3.56 Million

The project involved the construction of 54 new build properties on a recently cleared site in Renfrew.

Prior to construction, extensive community consultation took place to establish the exact needs and requirements for the new development and as such it has been very warmly received by all parties involved.

The project consisted of semi-detached housing of traditional construction, extensive streetscape and landscape remodeling and alterations to an existing community facility which shared the site. The project finished within budget and was the subject of numerous different funding sources that required separate reporting and accounting regimes. Our involvement was key to the successful completion of the project and was facilitated by open and frank communication with all members of the design team and the Contractors personnel
